

NASCPC BULLETIN

The National AIDs and STDs Control Programme

August 2020

NATIONAL DATA REPOSITORY (NDR)

Data used was downloaded from NDR on 06/08/2020

2,115,381

Number of individuals ever enrolled in care

243,263

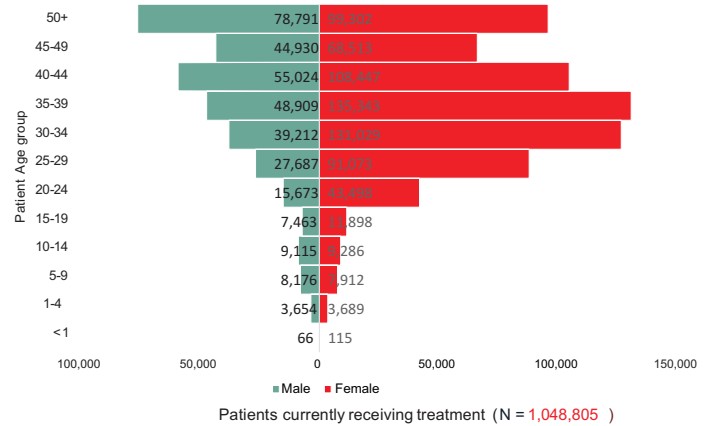

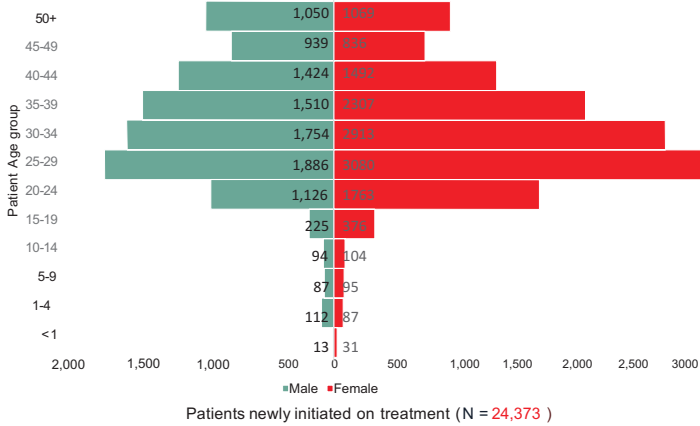

Number of Patients who visited within the month

1,945

Registered Facilities on the NDR
Treatment facilities reported for July: 1130
SURGE facilities reported for July: 428

SECOND 90: PATIENTS IN HIV CARE AND TREATMENT

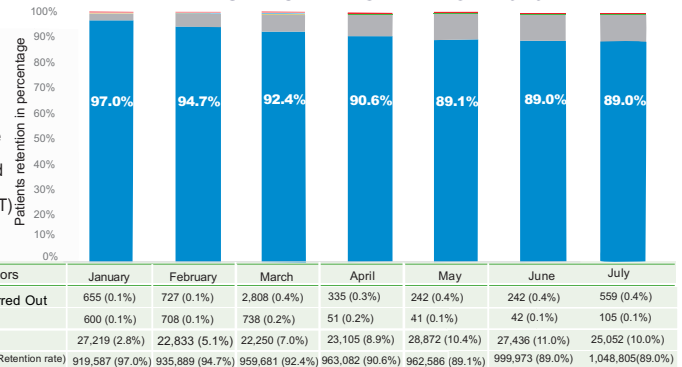

INDICATORS SUMMARY

Patient records uploaded as at the end of July 2020

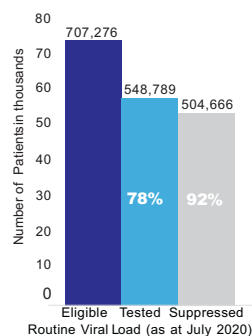

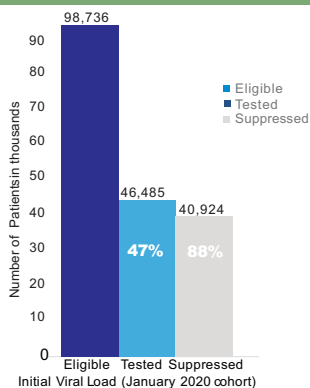

Indicators	Female (%)	Male (%)	Total
Treatment New	14,153 (58%)	10,220 (42%)	24,373
Treatment Current	710,105 (68%)	338,700 (32%)	1,048,805
LTFU	17,019 (68%)	8,033 (32%)	25,052
Death	53 (50%)	52 (50%)	105
Transferred Out	388 (69%)	171 (31%)	559

This graph presents monthly % retention of patients who were followed up from January 1st 2020, and those who entered the treatment program monthly (newly started on ART, transferred-in and re-initiated on ART) from January 2020 through July 2020

MONTHLY RETENTION ANALYSIS OF HIV PATIENTS RECEIVING ART FOR 2020

THIRD 90: VIRAL SUPPRESSION AND QUALITY OF CARE

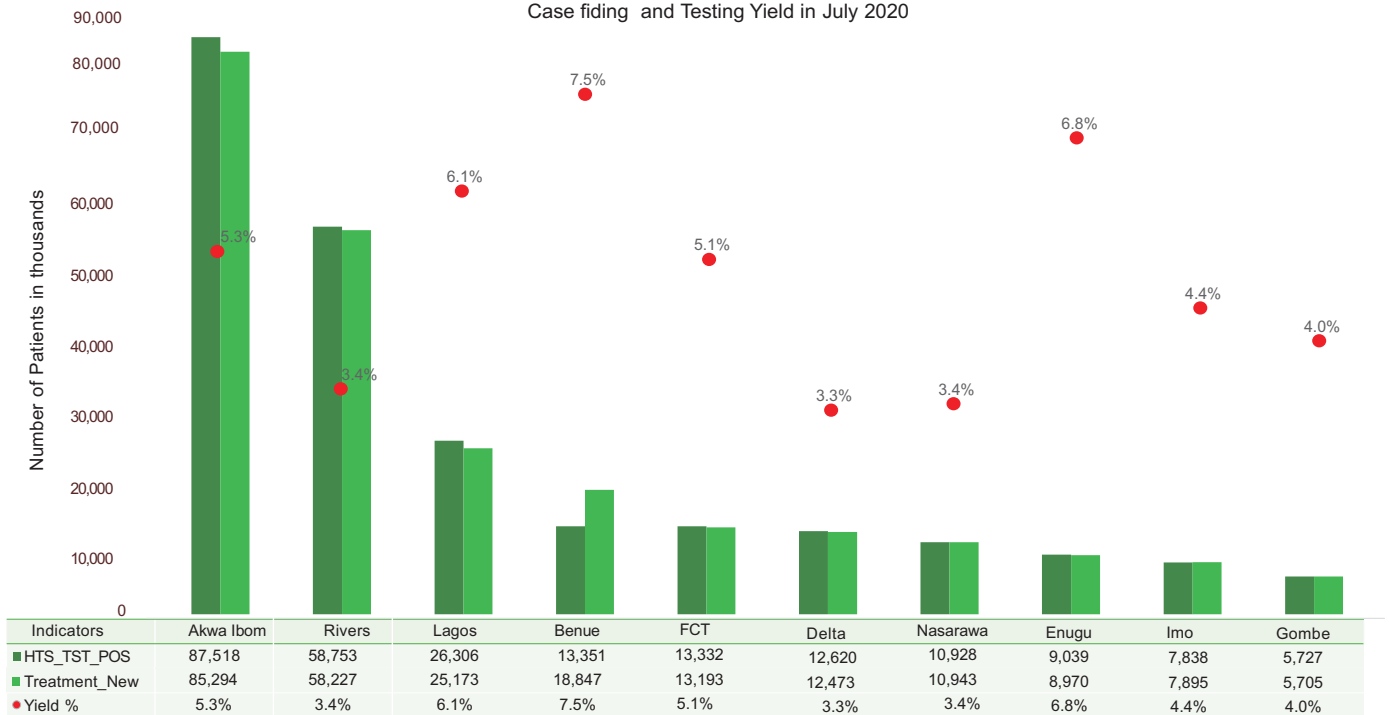

KEY: *TDF - Tenofovir *3TC - Lamivudine *AZT - Zidovudine *NVP - Nevirapine *DTG - Dolutegravir * VL - Viral Load

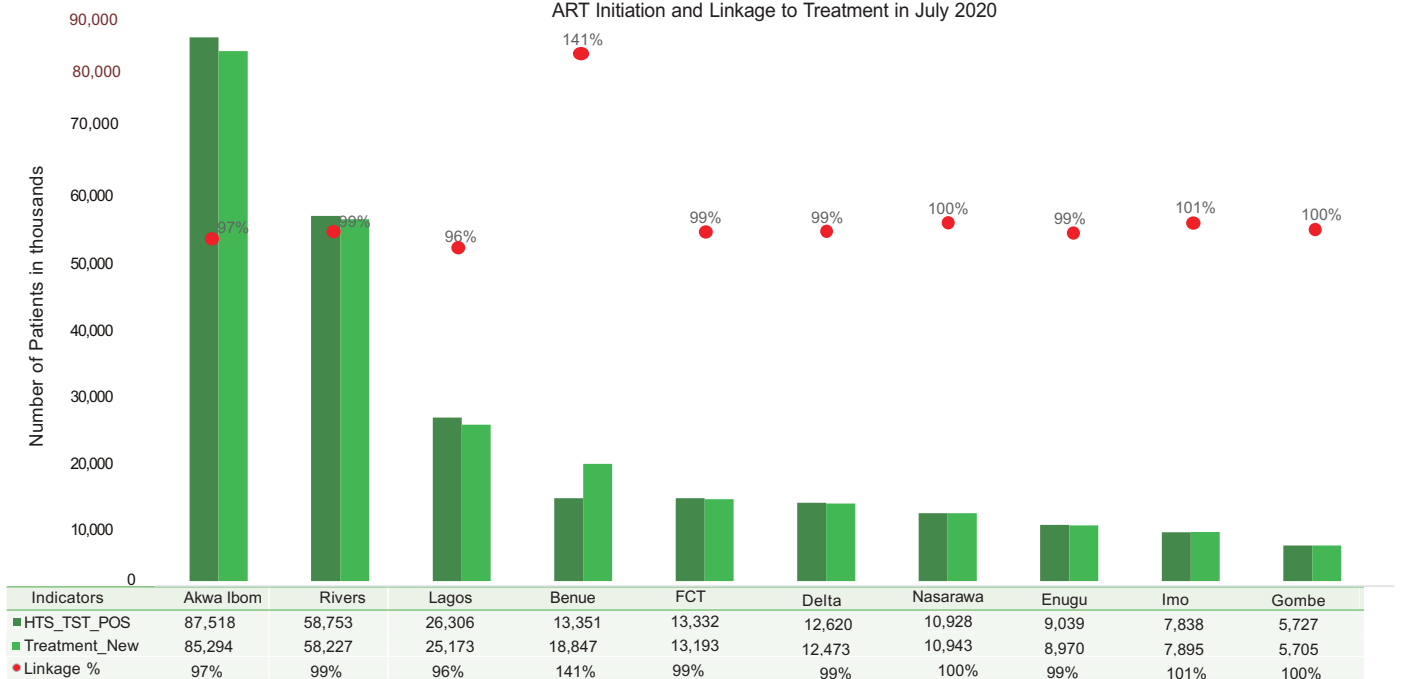

SURGE

The national prevalence of HIV is 1.3% (1.9 million people infected) and varies widely between 0.3% to 5.5% among states. Ten states with different saturation and unmet need account for about 70% of the burden. To reach epidemic control, Nigeria has scaled up evidence-based interventions tailored toward case finding, linkage to care with immediate ART initiation, and improved viral suppression.

Case finding and Testing Yield in July 2020

ART Initiation and Linkage to Treatment in July 2020

HTS_TST_POS: Number of individuals who received HIV Testing Services (HTS) and received their test results.

Treatment NEW: Number of adults and children newly enrolled on antiretroviral therapy (ART).

Yield: Percentage of Positive test results from testing program.

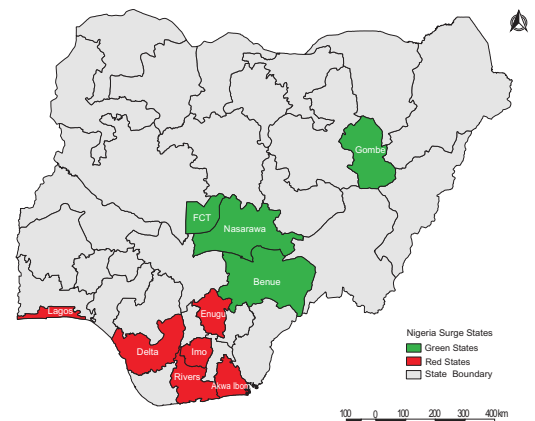

Linkage %: Percentage of HIV positive that linked for treatment initiation.

VIRAL LOAD CASCADE FOR JANUARY - JUNE 2020

Data used was downloaded from LIMS (Laboratory Information Management System)

473,072

Samples sent for Testing

409,681

Valid samples tested

392,144

Samples dispatched

376

Samples rejected

EID CASCADE FOR JANUARY - JUNE 2020

22,039

Samples sent for testing

22,256

Total samples tested

19,072

Samples dispatched

47

Samples rejected

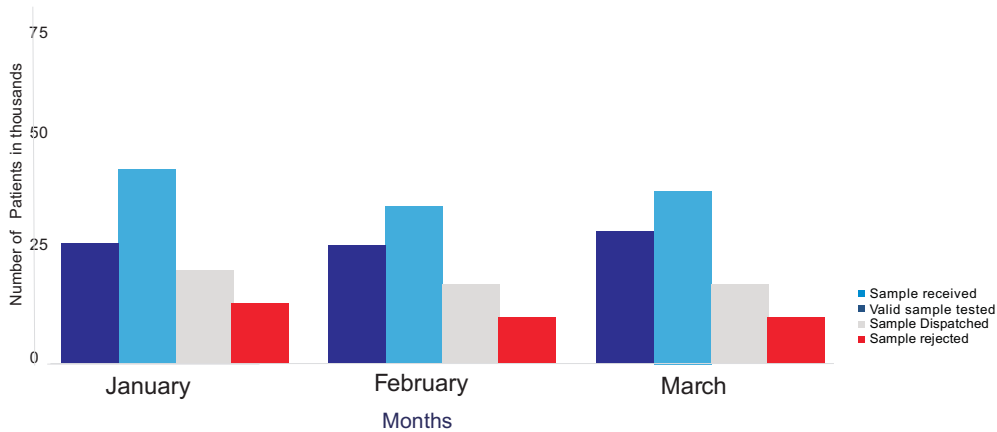

Fig1: Multiple Bar chart showing Viral Load and EID Cascade

There is a significant gap between samples received for viral load and samples tested and this is largely due to machine downtime and sample backlog in a few high volume sites.

The range of turn around time for the Viral load is between 3 - 28 days while EID has a turn around time of 10 - 30 days.

VIRAL LOAD TABLE FOR THE MULTI BAR CHART

	January	February	March	April	May	June
Sample received	79,742	78,958	102,348	52,594	51,904	81,547
Sample Tested	60,519	72,265	77,624	60,285	47,281	54,751
Valid Sample tested	58,526	70,451	74,638	57,925	45,936	53,818
Sample despatched	48,793	69,072	74,279	60,349	45,401	49,839
Sample rejected	61	70	66	68	45	42

EID TABLE FOR THE MULTI BAR CHART

Sample Rejected	14	9	10	7	3	4

PROGRAMME UPDATE

PSM SITUATION ROOM

The COVID-19 pandemic brought many uncertainties and the potential impact on HIV services was of particular concern. In order to avoid a disruption in ARV drug supply, a Situation Room was set up by NASCP to provide a platform for identifying and responding to emerging issues. The PSM situation room was activated on the 27th March 2020 and had representatives from NACA, NPSCMP, USAID, CDC, DOD, GHSC-PSM, CHAI, FHI360/GF, WHO, UNICEF, UNAIDS, LSMOH and AHF. Meetings are held virtually; Initially twice a week but now once weekly. The main goal of the PSM Situation Room is to constantly review the impact of global supply chain challenges on the national programme, share information, and provide guidance on measures to ensure supplies of commodities and other HIV services are sustained.

Specifically, the Situation Room

- Provides regular updates to national and state level stakeholders on HIV PSM issues
- Closely monitors in-country stock situation and shipment status of commodities;
- Assesses the impact of border closure and restrictions on the supply chain;
- Determines how supply will be impacted and the key risks;
- Advises on demand planning based on stock situation; and
- Provides guidance in the event of supplies constraints to avoid service interruption.
-

Integrated Biological and Behavioral Surveillance Survey (IBBSS) 2020

The 2020 Nigeria IBBSS is designed to build on the lessons learned from the previous IBBSS, the 2012 NARHS Plus, the ANC Surveillance, and The Nigeria AIDS indicator Impact Survey. The proposed IBBSS will facilitate the measurement of behavioral risk factors and HIV status among selected key population in Nigeria. It aims to complement the knowledge gained so that viable education, prevention, and treatment programmes can be designed and implemented. It will further provide valuable information for stakeholders in the description and understanding of HIV dynamics and the effects of interventions. The outcome of this survey will provide opportunities for appropriate follow-up for clinical and social support services (counselling and testing, STI services, and “prevention with positives” support) including referrals.

A probability-based sampling method using multistage sampling technique will be used for sampling all the KP groups by typology. A total sample size of 18,324 will be drawn from twelve states: Abia, Anambra, Benue, Nasarawa, Akwa Ibom, Rivers, Taraba, Gombe, Lagos, Oyo, Kaduna and Kano.
